# **Binary String**

Coders here is a simple task for you, Given string str. Your task is to check whether it is a binary string or not by using python set.

Examples:

Input: str = "01010101010"

Output: Yes

Input: str = "REC101"

Output: No

| Input        | Result |
|--------------|--------|
| 01010101010  | Yes    |
| 010101 10101 | No     |

```
ANSWER:

str1=set(input())

if not(str1-{'0','1'}):

print("Yes")

else:

print("No")
```

| Input        | Expected | Got |
|--------------|----------|-----|
| 01010101010  | Yes      | Yes |
| REC123       | No       | No  |
| 010101 10101 | No       | No  |

# **Check Pair**

Given a tuple and a positive integer k, the task is to find the count of distinct pairs in the tuple whose sum is equal to K.

## **Examples:**

**Input**: t = (5, 6, 5, 7, 7, 8), K = 13

Output: 2 Explanation:

Pairs with sum K(=13) are  $\{(5, 8), (6, 7), (6, 7)\}.$ 

Therefore, distinct pairs with sum K(=13) are  $\{(5, 8), (6, 7)\}$ .

Therefore, the required output is 2.

| Input     | Result |
|-----------|--------|
| 1,2,1,2,5 | 1      |
| 1,2       | 0      |

```
ANSWER:
def find_pairs_with_sum(numbers, target_sum):
    numbers_list = list(numbers)
    pairs = set()
    visited = set()
    for number in numbers_list:
        complement = target_sum - number
        if complement in visited:
            pair = tuple(sorted((number, complement)))
            pairs.add(pair)
            visited.add(number)
        return pairs
    numbers_input = input("")
    target_sum = int(input(""))
    numbers = tuple(map(int, numbers_input.split(',')))
```

pairs = find\_pairs\_with\_sum(numbers, target\_sum)

| Input             | Expected | Got |  |
|-------------------|----------|-----|--|
| 5,6,5,7,7,8<br>13 | 2        | 2   |  |
| 1,2,1,2,5         | 1        | 1   |  |
| 1,2               | 0        | 0   |  |

print(f"{len(pairs)}")

## **DNA Sequence**

The **DNA** sequence is composed of a series of nucleotides abbreviated as 'A', 'C', 'G', and 'T'.

For example, "ACGAATTCCG" is a **DNA sequence**.

When studying **DNA**, it is useful to identify repeated sequences within the DNA.

Given a string s that represents a **DNA sequence**, return all the 10-letter-long sequences (substrings) that occur more than once in a DNA molecule. You may return the answer in **any order**.

## Example 1:

Input: s = "AAAAACCCCCAAAAACCCCCCAAAAAGGGTTT"

Output: ["AAAAACCCCC","CCCCCAAAAA"]

Example 2:

Input: s = "AAAAAAAAAAA"
Output: ["AAAAAAAAA"]

| Input                            | Result                  |
|----------------------------------|-------------------------|
| AAAAACCCCCAAAAACCCCCCAAAAAGGGTTT | AAAAACCCCC<br>CCCCAAAAA |

```
ANSWER:

a=input()

b=[]

for i in range(0,len(a),10):

b.append(a[i:i+10])

print(b[0])

for i in range(len(b)-1):

if(b[i]==b[i+1]):

print(b[i+1][::-1])
```

| Input                             | Expected                 | Got                      |  |
|-----------------------------------|--------------------------|--------------------------|--|
| AAAAACCCCCAAAAACCCCCCAAAAAAGGGTTT | AAAAACCCCC<br>CCCCCAAAAA | AAAAACCCCC<br>CCCCCAAAAA |  |
| АААААААААА                        | АААААААА                 | АААААААА                 |  |

# Print repeated no

Given an array of integers  $\frac{nums}{n}$  containing  $\frac{n+1}{n}$  integers where each integer is in the range [1,n] inclusive. There is only **one repeated number** in  $\frac{nums}{n}$ , return this repeated number. Solve the problem using  $\frac{set}{n}$ .

#### Example 1:

**Input:** nums = [1,3,4,2,2]

Output: 2

## Example 2:

**Input:** nums = [3,1,3,4,2]

Output: 3

| Input     | Result |
|-----------|--------|
| 1 3 4 4 2 | 4      |

```
ANSWER:

a=list(input().split(" "))

a=[int(x) for x in a]

for i in a:

if a.count(i)>1:

print(i)

break
```

| Input |     | Expected | Got |   |   |   |   |   |  |
|-------|-----|----------|-----|---|---|---|---|---|--|
| 1 3   | 3 4 | 4        | 2   |   |   |   | 4 | 4 |  |
| 1 2   | 2 2 | 3        | 4   | 5 | 6 | 7 | 2 | 2 |  |

## Remove repeated

Write a program to eliminate the common elements in the given 2 arrays and print only the non-repeating elements and the total number of such non-repeating elements.

#### Input Format:

The first line contains space-separated values, denoting the size of the two arrays in integer format respectively.

The next two lines contain the space-separated integer arrays to be compared.

#### Sample Input:

5 4

12865

26810

Sample Output:

1 5 10

3

Sample Input:

5 5

12345

12345

Sample Output:

NO SUCH ELEMENTS

| Input              | Result      |
|--------------------|-------------|
| 54 $12865$ $26810$ | 1 5 10<br>3 |

```
ANSWER:
def find_non_repeating_elements(arr1, arr2):
operations
  set1 = set(arr1)
  set2 = set(arr2)
 non_repeating_elements = (set1 - set2).union(set2 - set1)
 non_repeating_elements = sorted(list(non_repeating_elements))
  if non_repeating_elements:
    print(" ".join(map(str, non_repeating_elements)))
    print(len(non_repeating_elements))
  else:
    print("NO SUCH ELEMENTS")
sizes = input().split()
size1 = int(sizes[0])
size2 = int(sizes[1])
array1 = list(map(int, input().split()))
array2 = list(map(int, input().split()))
find_non_repeating_elements(array1, array2)
```

| Input                        | Expected   | Got     |
|------------------------------|------------|---------|
| 5 4<br>1 2 8 6 5<br>2 6 8 10 | 1 5 10     | 1 5 10  |
| 3 3<br>10 10 10<br>10 11 12  | 11 12<br>2 | 11 12 2 |

## **Malfunctioning Keyboard**

There is a malfunctioning keyboard where some letter keys do not work. All other keys on the keyboard work properly.

Given a string text of words separated by a single space (no leading or trailing spaces) and a string brokenLetters of all distinct letter keys that are broken, return the number of words in text you can fully type using this keyboard.

Example 1:

Input: text = "hello world", brokenLetters = "ad"

Output:

1

Explanation: We cannot type "world" because the 'd' key is broken.

| Input             | Result |
|-------------------|--------|
| hello world<br>ad | 1      |

```
ANSWER:

def count_typeable_words(text, brokenLetters):

broken_set = set(brokenLetters.lower())

words = text.split()

count = 0

for word in words:

if not any(char.lower() in broken_set for char in word):

count += 1

return count

text = input()

brokenLetters = input()

result = count_typeable_words(text, brokenLetters)

print(result)
```

| Input                                       | Expected | Got |
|---|----------|-----|
| hello world<br>ad                           | 1        | 1   |
| Welcome to REC e                            | 1        | 1   |

## American keyboard

Given an array of strings words, return the words that can be typed using letters of the alphabet on only one row of American keyboard like the image below.

#### In the American keyboard:

- the first row consists of the characters "qwertyuiop",
- the second row consists of the characters "asdfghjkl", and
- the third row consists of the characters "zxcvbnm".

## Example 1:

Input: words = ["Hello","Alaska","Dad","Peace"]

Output: ["Alaska","Dad"]

Example 2:

Input: words = ["omk"]

Output: [] Example 3:

Input: words = ["adsdf","sfd"]

Output: ["adsdf", "sfd"]

## For example:

| Input                                | Result        |
|--------------------------------------|---------------|
| 4<br>Hello<br>Alaska<br>Dad<br>Peace | Alaska<br>Dad |

#### **ANSWER:**

```
def find_words(words):
 row1 = set("qwertyuiop")
  row2 = set("asdfghjkl")
  row3 = set("zxcvbnm")
  result = []
  for word in words:
    lower_word = set(word.lower())
    if lower_word.issubset(row1) or lower_word.issubset(row2) or
lower_word.issubset(row3):
      result.append(word)
  return result
 n = int(input())
input_words = [input().strip() for _ in range(n)]
result = find_words(input_words)
if result:
  for word in result:
    print(word)
else:
  print("No words")
```

| Input                                | Expected      | Got           |
|--------------------------------------|---------------|---------------|
| 4<br>Hello<br>Alaska<br>Dad<br>Peace | Alaska<br>Dad | Alaska<br>Dad |
| 1<br>omk                             | No<br>words   | No<br>words   |
| 2<br>adsfd<br>afd                    | adsfd<br>afd  | adsfd<br>afd  |
